PROFESSIONAL SUMMARY:

Motivated Computer Science graduate with a strong foundation in Python, SQL, Flask, web development, and machine learning. Experienced in developing CRUD-based web applications, database-driven systems, and machine learning solutions using Python. Skilled in database integration, data analysis, and problem-solving through academic projects and virtual internship experience. Eager to contribute as a Software Developer or Python Developer while continuously learning and adapting to new technologies.

TECHNICAL SKILLS:

Languages: Python, SQL
Web Technologies : HTML, CSS, Javascript
Framework & Libraries: Flask, Numpy, Pandas, Matplotlib, Seaborn
Tools: Git, GitHub, VS Code, Jupyter Notebook
Database: MySQL, SQLite
Concepts: OOP, CRUD Operations, Machine Learning

EDUCATION:

B.Tech - Computer Science and Engineering

(2021-2025)

International School of Technology and Sciences for women, Rajanagaram

INTERNSHIP:

Infosys Springboard – Virtual Internship

Project: Smart Air Quality Prediction System

September 2025 – November 2025

- Developed a machine learning-based Smart Air Quality Prediction System using Python by preprocessing air quality datasets and building predictive models.
- Collaborated with team members to evaluate model performance, test prediction results, and improve system accuracy through data analysis and problem-solving techniques.
- Gained hands-on experience in Python programming, data preprocessing, machine learning concepts, and project development.

PROJECTS:

Personal Expense Tracker

Python, Flask, SQLite, HTML, CSS

- Developed a web-based expense management application using Python, Flask, and SQLite to record, track, and organize daily expenses efficiently.
- Implemented CRUD operations with a responsive user interface, enabling users to add, update, delete, and view expense records seamlessly.

Student Management System:

Python, MySQL, SQL

- Developed a Student Management System using Python and MySQL to store, manage, and retrieve student information efficiently.
- Implemented database operations for adding, updating, deleting, and searching student records using SQL queries and relational database concepts.

Fake Social Media Profile Detection Using Machine Learning

Python, Pandas, NumPy, Matplotlib, Scikit-learn

- Built a machine learning model to classify genuine and fake social media profiles using Logistic Regression.
- Performed data preprocessing, exploratory analysis, and model evaluation, with visualizations created using Matplotlib and Seaborn.

CERTIFICATIONS:

- **Introduction to HTML** - Sololearn
- **Basics of Python** - Infosys Wingspan
- **SQL Bootcamp** - Udemy
- **AI Tools & ChatGPT Workshop** - BE10X
